## EDUCATION

---

### University of Colorado, Boulder

2021 - 2025

B.S. in Computer Science & Engineering · GPA: 3.7

**Relevant Coursework:** Computer Architecture, Concurrent Programming, Computer Security, Network Systems, Compiler Construction, Operating Systems, Algorithms, Theory of Computation, IP Routing Protocols/Policies

## SKILLS

---

**Languages:** C/C++, Python, Javascript, x86 Assembly, Scala, Java, PostgreSQL

**Tools:** SONiC, Linux, gdb, Makefile, Perforce, Jira, Jenkins, Microsoft Office, AWS, Juniper/Cisco/Arista

**Other:** Communication, Teamwork, Time Management, Organization, Mandarin

**Certifications:** JNCIA-Junos, JNCIS-ENT, JNCIS-SP, Arista L3 Data Center

## EXPERIENCE

---

### Nexthop AI

January 2026 - May 2026

*Customer Engineer*

*Bellevue, WA*

- Acted as a main technical point of contact between large enterprise customers and internal teams to help design network hardware and software.
- Wrote and maintained test cases for SONiC, achieving over 90% test coverage across network OS features.
- Built and shipped new SONiC features, supporting both internal development and customer-specific networking needs.

### Netceed

Jun 2025 - Jan 2026

*Field Solutions Engineer*

*Remote, Longmont CO*

- Achieved 3 certifications in 80 days while assisting in managing the Juniper product line
- Worked closely with several vendors as a certified Partner to create solutions for several customers.
- Assisted in pre-sales consultation, leading to over **\$32k** in revenue, in addition to creating an automation system for handling quotes.
- Directly involved in presenting and handling a deal valued at over \$1,000,000.

### Seagate

May 2024 - August 2024

*Firmware Engineering Intern*

*Longmont CO*

- Helped develop a new diagnostics system which helped save over 200kB of ROM in hard drives by migrating existing diagnostics over to new system.
- Developed firmware in C for SOCs on drives, and utilized Buildbox to run unit tests to verify functionality.

### Ricoh

May 2023 - August 2023

*Software Engineering Intern*

*Longmont, CO*

- Worked on automated trials system to allow hundreds of customers easy access to software trials, increasing sign-up rates by up to 50%.
- Worked with Javascript and AWS to design an email delivery system as part of automated trials workflow.

## PROJECTS

---

### Python to x86-32 Compiler

- Developed a Python to x86-32 compiler in Python that supports typing, flow control, and functions.
- Compiler is able to parse, tokenize, generate ASTs, explicate, and fully compile to x86-32 assembly, and is capable of several optimizations.

### HTTP Proxy

- Developed a multi-threaded Proxy in C to redirect HTTP requests between client and server.
- Implemented a caching system to store recent requests to reduced load on the proxy.
